

Client Intake & CRM Automation for Real Estate Teams

Automatically capture, qualify, route, and log every buyer or seller inquiry in one organized system.

Project Summary

Industry: Real Estate Teams / Brokerages

Automation Type: Client Intake & CRM Automation

Built With: n8n, Notion, Gmail, JavaScript

Primary Goal: Reduce manual lead handling by automatically evaluating, routing, and logging new inquiries.

Overview / Client Problem

Real estate teams and brokerages live on lead flow. Website forms, listing inquiries, open house signups, referral requests, and ad campaigns can generate new opportunities at any moment.

The issue is not just lead volume. The real problem is lead handling.

Without a structured intake process, teams often end up with:

- incomplete buyer or seller inquiries
- slow response times on high-intent prospects
- leads sitting in inboxes instead of a CRM
- inconsistent follow-up across agents
- too much manual admin just to understand who needs attention first

For a brokerage, that means good leads can go cold before the right person even sees them.

Solution

I built an n8n workflow that turns raw form submissions into a structured lead intake system for real estate operations.

Each new inquiry is cleaned, evaluated, logged, and routed automatically based on the information provided. The workflow checks for lead completeness, reviews budget and intent signals, and assigns the right status so the team can act quickly and consistently.

Instead of making agents sort through every submission by hand, the workflow handles the first layer of qualification automatically. High-priority leads trigger immediate alerts,

incomplete leads receive a request for more details, and lower-priority submissions are redirected in a professional way. At the same time, every record is stored in a CRM or database for visibility and follow-up.

Workflow Breakdown

1. Lead Capture

A new client or lead form submission starts the workflow the moment it comes in.

2. Data Simplification

The submitted information is cleaned and standardized so names, emails, budgets, and project details are easier to process downstream.

3. Lead Evaluation

The workflow reviews key qualification signals such as budget level, completeness of the submission, and overall lead quality.

4. CRM Logging

Every lead is recorded in a structured CRM or database table, giving the brokerage a clear source of truth for tracking and follow-up.

5. Routing Logic

The workflow classifies the lead into the right branch based on its status, such as high budget, low budget, or missing information.

6. Automated Email Action

Each lead receives the appropriate email response automatically, whether that is an internal alert, a polite redirect, or a request for more details.

2. Sample Lead Input

Lead Input

```
```json
```

```
{
 "Name": "Emily Carter",
 "Email": "emily.carter@oakridgehomes.com",
 "Inquiry Details": "Looking to purchase a 4-bedroom single-family home in the Austin area within the next 2-3 months. Our budget is around $850,000, and we'd like to schedule property viewings as soon as possible.",
 "Budget": "$800,000 - $900,000",
 "Move-in Date": "2026-08-15"
}
```

Shows the type of lead record entering the system, including name, email, budget, and project details.

## 3. Lead Evaluation Output

```
{
 "Name": "Emily Carter",
 "Email": "emily.carter@oakridgehomes.com",
 "Inquiry Details": "Looking to purchase a 4-bedroom single-family home in the Austin area within the next 2-3 months. Our budget is around $850,000, and we'd like to schedule property viewings as soon as possible.",
 "Budget Range": "$800,000 - $900,000",
 "Budget Value": 800000,
 "Move-in Date": "2026-08-15",
 "Lead Priority": "High"
}
```

## 4. Notion / CRM Logging

**CRM Log Lead**

## CRM Log Lead

Table

Name	Email	Inquiry Details	Move-in Date	Budget Range	Budget Value	Status
Emily Carter	emily.carter@oakridgehomes.com	Looking to purchase a 4-bedro	August 15, 2026	\$800,000 – \$900,000	800000	High Budget
David High	david@highbudget.com	Need an enterprise-grade AI ch	July 10, 2026	\$5000 - \$9999	5000	High Budget
John Incomplete	Email Missing	We need an industry level AI ch	July 1, 2026	\$5000 - \$9999	5000	Missing Info
Sarah Low	sarah@lowbudget.com	I need a very simple 1-page lan	July 5, 2026	\$1000 - \$2000	1000	Low Budget

+ New page

**Shows the structured record created for each lead, making the intake pipeline easy to review and manage.**

## 5. Gmail Alert Notification

Shows the automated email sent after qualification, ensuring the right message reaches the right person without delay.

## Business Impact

For real estate teams and brokerages, this workflow improves the part of lead management that matters most: speed and consistency.

It helps teams:

- respond faster to serious buyer and seller inquiries
- reduce manual sorting and inbox checking
- keep lead records organized in one place
- route incomplete or low-fit inquiries appropriately
- create a more reliable intake process across the whole team

The result is a cleaner front end for lead management and a more responsive experience for prospects. That directly supports better follow-up, stronger pipeline hygiene, and less administrative friction for agents and admin staff.

## Closing Line

If your real estate team or brokerage is spending too much time manually sorting inquiries, I can build a tailored intake and routing workflow that automatically qualifies, organizes, and routes every lead to the right place.
